

EPRR NHS

Training Prospectus

Though the COVID pandemic might be over, the effects on organisations continue to be felt. The Emergency Preparedness, Resilience and Response (EPRR) standard has been created to reinforce the ability to respond to any incident in the NHS.

Peter Stanley Training has been delivering incident command training since 2008, teaching thousands of delegates at strategic, tactical and operational levels across public and private sectors. We're extremely proud to extend our offering with tailor-made training on EPRR for the NHS.

All our courses are delivered by blended learning. There are some sessions requiring either online or onsite sessions of a couple of hours, but the courses take place at a pace to suit you. We understand that you can't always send delegates away from their roles for days at a time.

We're obsessed with client quality and experience. To that end:

- The CPD accredits all our NHS EPRR courses
- Peter Stanley Training only uses tutors at Level 5 or above
- We deliver courses on your site, at ours, or remotely
- Live role-players, all senior ex-Blue-Light, can be deployed to enhance simulations

Our intention is always to create long-term value-creating relationships with our clients. Towards this, we are not just presenting courses that will help you meet your immediate EPRR compliance obligations but also revalidation courses for when the time comes. We're also open to licencing our course content and training your trainers so you can deliver internally.

We aim to help you get the necessary training with a minimum of fuss and to the highest possible quality. We hope you find what you're looking for from among the courses here. If you want something different, just let us know.

Peter Stanley

EPRR NHS

Strategic Incident Commander

An NHS Strategic Commander has overall command of the organisation’s resources. They are responsible for liaising with partners to develop the strategy, policies and objectives and to allocate the funding which will be required to manage the incident. They will also ensure arrangements are in place to support the recovery from an incident.

Delegate Type

NHS officers who will operate at Strategic Gold level during a major incident or emergency.

Course Activities

Presentations, case studies, professional discussion and practical simulation.

Class Size

8 +

Duration

8 hours

Cost per Delegate

£350

Awarding Body:

Continuing Professional Development Office (CPD)

1. Develop and review response and communications strategies for your organisation with appropriate stakeholders and multi-agency partners.
2. Coordinate and communicate effectively at a tactical and strategic level, across health and with multi-agency partners.
3. Gather and share information and intelligence to inform effective decision-making.
4. Make effective decisions based on the best available information (e.g., through the Joint Decision Model).
5. Brief the strategic plan, appropriately delegate to the tactical level and regularly review.
6. Ensure sufficient and appropriate resources are available to support the response.
7. Identify the long-term and medium-term recovery priorities.
8. Ensure effective and timely handover of command.
9. Fully record decisions, actions, options and rationale per current guidance, policy and legislation.

EPRR NHS

Tactical Incident Commander

An NHS Tactical Commander is responsible for directly managing their organisation’s response to an incident. They will interpret strategic direction and develop the tactical plan to achieve the objectives set by strategic command.

Delegate Type

NHS officers who will operate at Tactical Silver level during an incident or emergency.

Course Activities

Presentations, case studies, professional discussion and desk top simulation.

Class Size

8 +

Duration

8 hours

Cost per Delegate

£275

Awarding Body:

Continuing Professional Development Office (CPD)

1. Work in cooperation with and communicate effectively with other health and multiagency partners at the tactical level.
2. Gather and share information and intelligence to inform effective decision-making.
3. Make effective decisions (e.g., through the Joint Decision Model).
4. Undertake an ongoing assessment of the risks to the community's health and healthcare delivery to the community.
5. Develop tactical plans aligned to the strategic plan based on available information, incident and emergency plans and the assessed risks.
6. Implement and brief tactical plans, reviewing them on an ongoing basis in consultation with key staff and partners.
7. Determine and prioritise the resources required for the response in the short and longer term.
8. Provide accurate and timely information to inform and protect the community, working with the media where relevant and within the agreed organisational communication strategy.
9. Coordinate responses from the operational level.
10. Identify where circumstances warrant a strategic management level and ensure full briefings as required.
11. Ensure effective and timely handover of command.
12. Maintain the health, safety and welfare of individuals during the response.
13. Fully record decisions, actions, options and rationale per current guidance, policy and legislation.

EPRR NHS

Operational Incident Commander

An NHS Operational Commander is responsible for managing the main working elements of the response to an incident, by ensuring rapid and effective actions are taken, and implementing the tactical plan.

Delegate Type

NHS officers who will operate at Operational Bronze level during an incident or emergency.

Course Activities

Presentations, case studies, professional discussion and desk top exercise.

Class Size

10 +

Duration

4 hours

Cost per Delegate

£100

Awarding Body:

Continuing Professional Development Office (CPD)

1. Assess the situation and report to other responders and to a tactical level.
2. Conduct a dynamic risk assessment.
3. Prepare, implement and review a plan of action based on the dynamic risk assessment and tactical plan within own operational area of responsibility.
4. Ensure that any individuals under your command are fully briefed and de-briefed.
5. Work in cooperation with, and communicate effectively with, other responders.
6. Assess the resources required and deploy them to meet the needs of the response.
7. Identify resource constraints and communicate to a tactical level.
8. Monitor and protect the health, safety and welfare of individuals during the response.
9. Identify where circumstances warrant a tactical level of management.
10. Make effective decisions (e.g., using the Joint Decision Model).
11. Ensure effective and timely handover of command.
12. Fully record decisions, actions, options and rationale per current guidance, policy and legislation.

EPRR NHS
